

**The best part of
your job shouldn't be
<writing code>**

At VITech, engineering starts
with the problem worth solving.

Measuring success by the value we deliver

We work with companies tackling some of the hardest challenges in healthcare and other complex industries.

Our engineers combine deep technical expertise, AI, product thinking, and close client collaboration to build solutions that create measurable business outcomes.

Born in Ukraine. Trusted globally

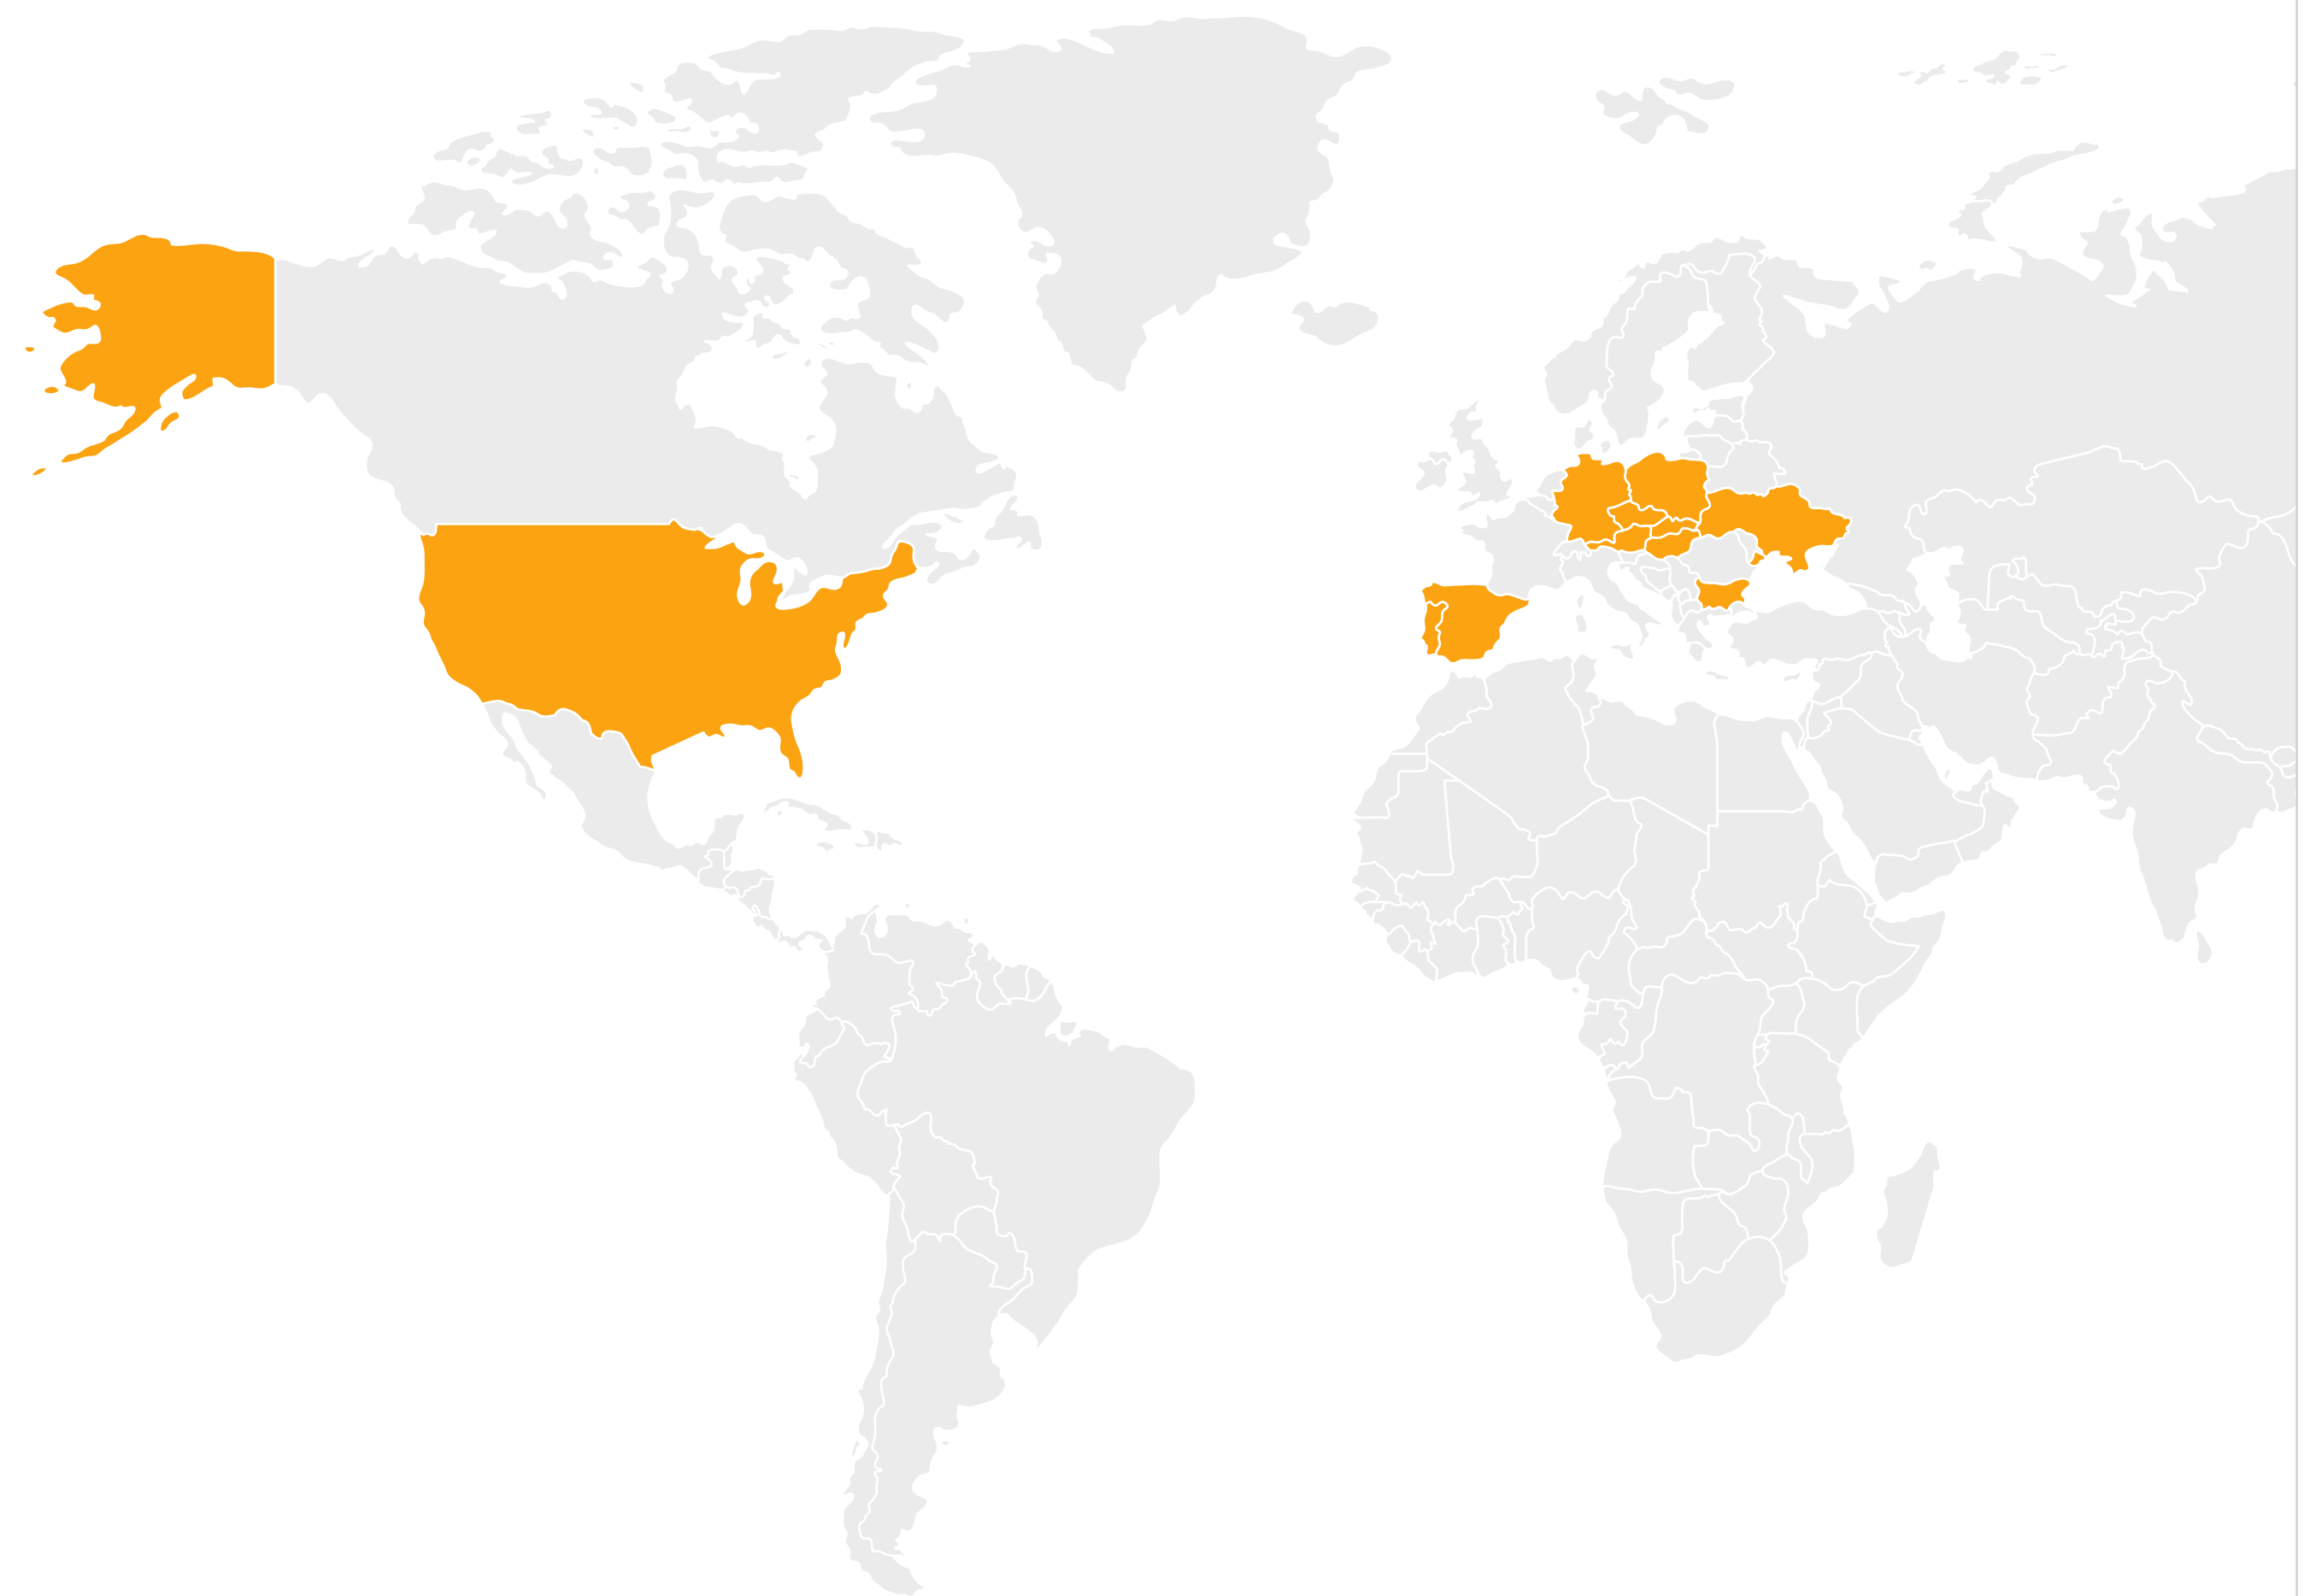

We're an engineering company founded in 2007,
with more than 160 specialists working across
12+ countries.

United States (Commercial HQ)
Chicago, IL | Atlanta, GA

Europe (R&D & Engineering)
Lviv, UA | Ivano-Frankivsk, UA | Warsaw, PL

Our roots shaped what we value most

Being a Ukrainian company has shaped the way we think about responsibility, resilience, and taking care of people.

Since the beginning of the full-scale war, we've contributed more than \$2.8M to support Ukraine, our teammates, and their families.

It's one of the clearest examples of our values in action.

Computer and network equipment

Independent power supply

Drones and vehicles

Connectivity (Starlinks)

Families of mobilized teammates

Humanitarian aid

Total contribution:

\$2.8M+

What guides our decisions every day

```
graph TD; PI[Purposeful innovation] --> C[What guides our decisions every day]; CT[Collaboration & teamwork] --> C; SI[Social impact] --> C; CGC[Continuous growth & craftsmanship] --> C; CC[Client-centricity] --> C; IO[Integrity & ownership] --> C;
```

Purposeful innovation

Collaboration & teamwork

Social impact

Continuous growth & craftsmanship

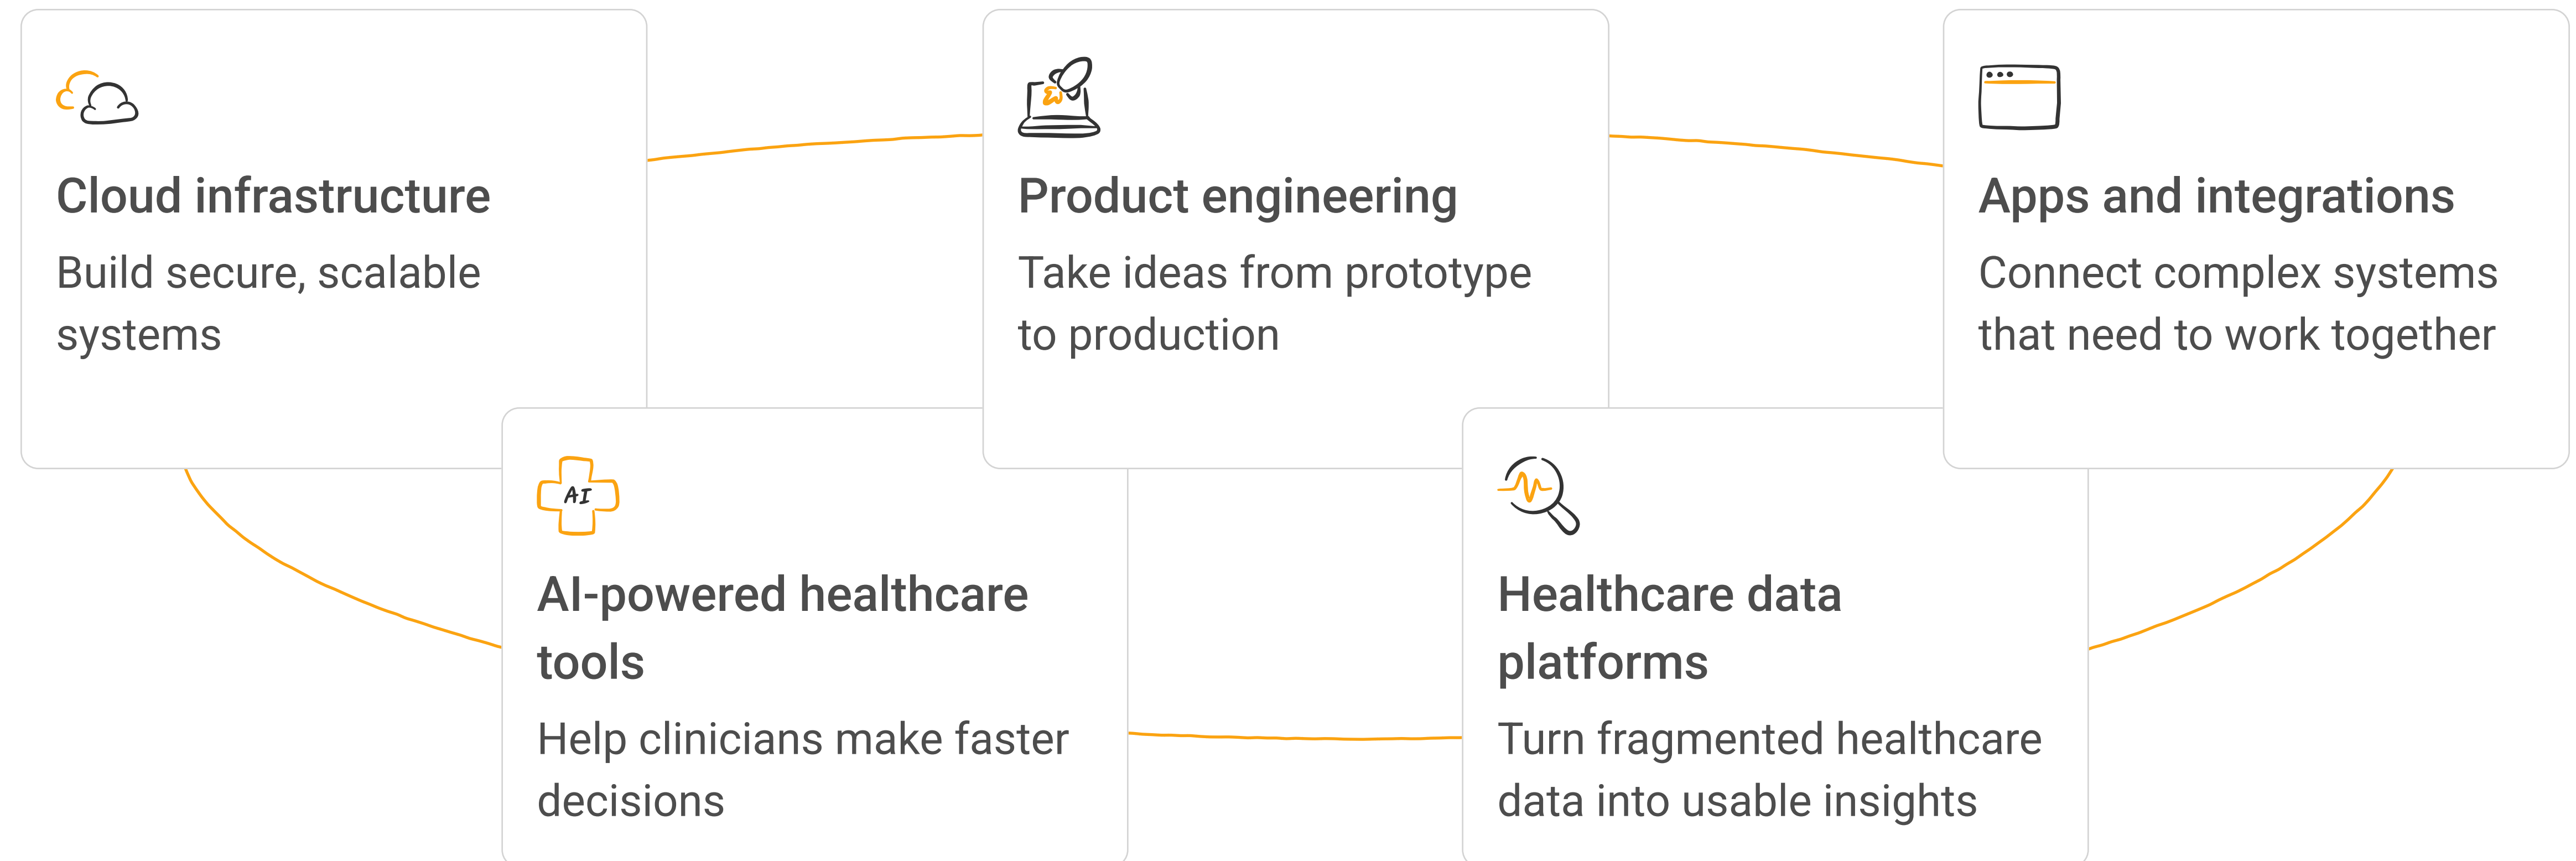

Client-centricity

Integrity & ownership

These principles guide how we work with our clients, collaborate with our teammates, and build products that solve meaningful problems.

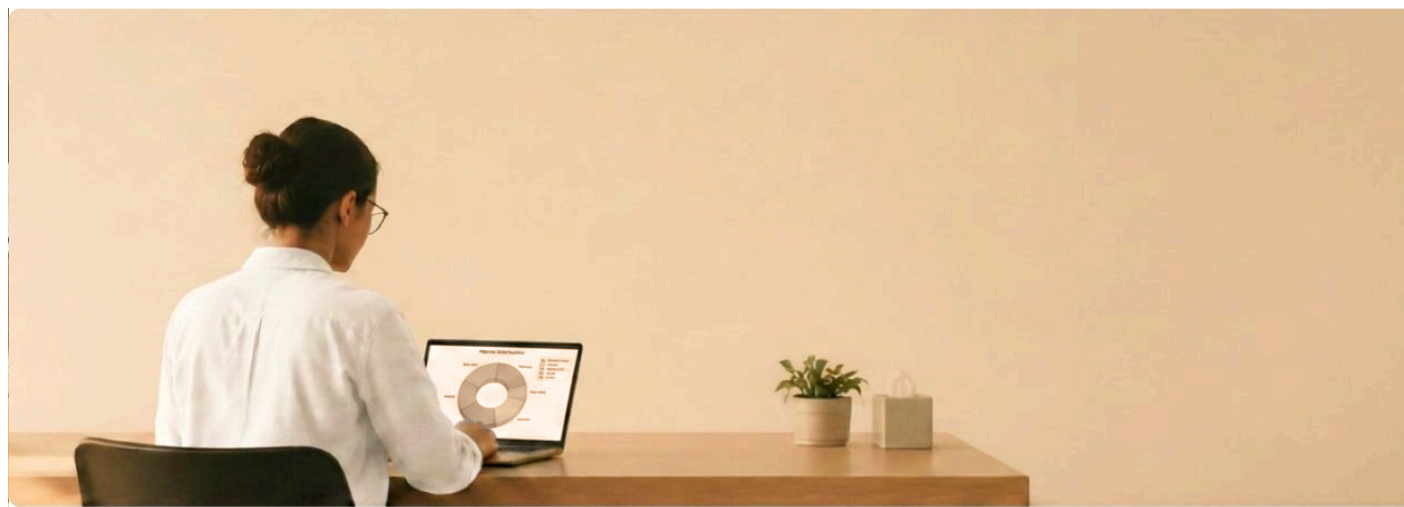

What problems we solve

From AI-powered healthcare tools to cloud platforms and production systems, you'll work on technology that solves complex real-world challenges.

Delivering value through engineering

Every project is different, but they all share one goal: creating measurable impact for the people who use them.

AI-powered healthcare assistant

Turned a prototype into a production-ready assistant that helps non-technical teams access complex healthcare data almost instantly.

10–15 days → seconds

Cloud optimization for large US healthcare platform

Redesigned cloud infrastructure to reduce AWS costs and cut report generation from 18 hours to 6.

\$2M+ saved annually

Defense technology

Built the operational layer that transformed ML outputs into actionable decisions in the field.

Real-time decision support

You'll have room to experiment

Great engineering doesn't stop at delivery. We encourage our teams to experiment, learn, and turn good ideas into real solutions.

Innovation Summits

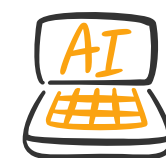

Our client-driven hackathons give engineers the space to explore ideas, validate them with real customer problems, and turn the best ones into prototypes, internal tools, or client-facing solutions.

Continuous Learning

We regularly create AI learning paths for engineers, with practical goals focused on agent design, LLM patterns, token efficiency, custom skills, sub-agents, and safe AI integration.

AI-powered Engineering

We actively use AI-assisted engineering practices, custom agents, and modern workflows to accelerate delivery without compromising quality.

Champions Program

AI Champions explore new tools, introduce practical workflows, and help teams apply AI effectively across different projects.

[How we ran AI hackathon](#)

Our love for solving hard problems once took us to NASA

And we won the Space Apps Challenge.

We built “2Plant or Not 2Plant,” a decision-support app that won the Galactic Impact award. Chosen from over 9,900 projects globally, our solution was recognized for it’s potential to improve life on Earth.

Growth doesn't happen after work

Experimenting is only part of the journey. We also invest in helping engineers grow through mentorship, feedback, and continuous learning.

Competence Manager

Your Competence Manager helps you set goals, track progress, and navigate your professional growth.

Continuous Learning

Access Udemy Business, English classes, certifications, conferences, and internal knowledge sharing.

Mentorship Program

Learn from experienced teammates and become a mentor yourself as your expertise grows.

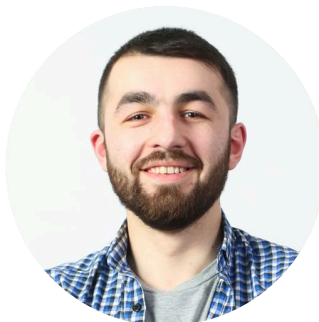

Progress Reviews

Regular feedback helps you understand expectations, celebrate progress, and identify your next growth opportunities.

People who grow with us tell the story best

And maybe soon, so will you.

Taras
Software Architect
📅 10 years at VITech

66

I joined VITech 10 years ago as a Middle Software Developer and have since taken on different roles. Some opportunities came through my own initiative, while others grew out of new projects and challenges. What I value most is having room to try something new, grow, lead, and take real responsibility for the path I choose.

Career journey

Ihor
Director of Engineering
📅 9.5 years at VITech

66

At VITech, I had the support to grow and the autonomy to make decisions. I was never left to “sink or swim.” From the start, I received mentorship, clear expectations, and meaningful responsibility. What matters most to me is that engineers are treated not as “resources,” but as people worth trusting, supporting, and investing in.

Career journey

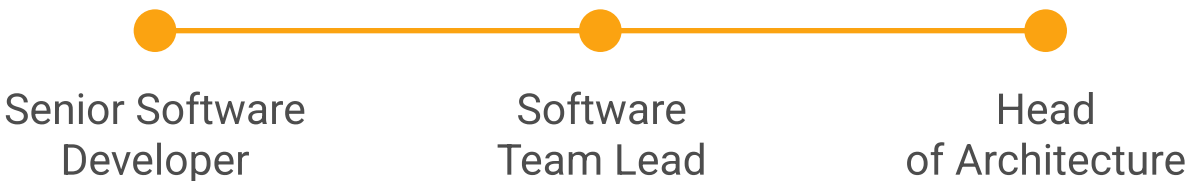

Serhiy
Head of Architecture
📅 14 years at VITech

66

Over 14 years at VITech, the most valuable thing for me has been trust. First as a junior engineer, and later as a lead, I had space to experiment, make mistakes, and learn. Each challenge helped me grow, take on more complex projects, and see that the company truly valued my work and growth.

Career journey

Great engineering starts with great people

We value curiosity, kindness, ownership, collaboration
and teamwork as much as technical excellence.

Supporting you beyond your role

Because your career is only one part of your life.

Benefits tailored to you

Choose how to use your annual benefit budget:

✓✓ Health & well-being

✓✓ Learning & certifications

✓✓ Sports & hobbies

✓✓ Family support

✓✓ Charitable donations

Well-being & time off

✓✓ Unlimited sick leave
with medical confirmation

✓✓ Birthday day off and additional
personal leave options

✓✓ Mental health and wellness
initiatives

Flexible ways of working

✓✓ Fully remote or hybrid work

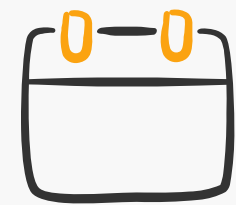

✓✓ Flexible working hours

✓✓ Modern offices in Lviv,
Ivano-Frankivsk, and Warsaw
coworking

✓✓ Top-spec equipment
and home office compensation

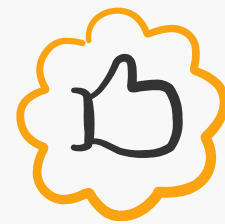

People stay, and we're proud of that

It's one of the strongest signals that we're on the right track.

How we work day to day

The questions candidates ask us most.

How big are the teams?

Small and cross-functional: typically a PM, 2–4 engineers, and QA, shaped around the product. You'll know everyone on your team by name, and they'll know your code.

What English level do I need?

B1+/B2 enough to discuss your work in daily standups and demos. English classes are part of the deal if you want to level up.

Will I talk to the client directly?

Yes. Our teams are embedded with the client's product team. You'll join demos, discuss trade-offs, and hear feedback firsthand.

How are projects assigned?

We match you based on your skills, growth goals, and interests — and we discuss it with you, not just inform you.

How do we ship?

Two-week sprints, working software from the first one. QA, CI/CD, and code reviews are built into how we work. Every sprint ends with a Value Delivery Report, so you always see how your work maps to real outcomes.

What about time zones?

Most collaboration is time-zone aligned with our US-based clients. Flexible hours mean you shape your day around focus time, not the other way around.

If this feels like the right place, let's talk.
