

VITech visual style guidelines

Revision 2.0 - April, 2025

Spelling

Wherever there is a need to spell the name of the company, on public pages, on social networks, in e-mails, letters, we spell the name of the company as follows: “VITech”. Alternative ways of spelling the company name, such as “V.I.Tech”, “VITECH”, “Vitech”, “vitech” are considered incorrect.

We pronounce it [vi:artek].

VITech

~~V.I.Tech~~

~~Vitech~~

~~VITECH~~

~~vitech~~

Logo

The company's logo consists of two elements: the logomark and the logotext, made with the modified Microsquare Bold font.

In some cases, when the usage of the logo in a very small size is needed, for example, for user pics on social networks, it is allowed to use a logomark without logotext.

Logo

Safe space

The safe zone around the logo is counted by the height uppercase “H” letter around the base of the logo.

Logo

What not to do

Here are some non-exhaustive examples of what not to do with the VITech logotype:

- the previous version of the logo may not be used
- do not change the proportions
- do not apply a special effect to the logo
- do not change the shape of the logo
- do not use a different typeface to write the word VITech

Logo

Backgrounds

The most preferred way of logo usage is the option on a white or light background. It is allowed to use the inverted version of the logo on a clean background of the colour of the logo, on a black or dark background.

In cases where colour printing is not available, monochrome versions of the logo may be used.

Avoid logo usage with a complex background, or with a background that is low-contrast to the logo.

Core brand colours

Hex #037EE6

Role Brand colour, logo, primary buttons

Use Logo, calls to action, interactive elements

Hex #FFFFFF

Role Background

Use Default page background

Hex #333333

Role Header text

Use All H1–H5 headings

Hex #FCA311

Role Warm accents

Use Hand-drawn elements, highlights, subtle icon details

Tip Use sparingly to preserve impact

Supporting colours

Hex #056BDA
Role Interactive states
Use Buttons states,
link interactions

Hex #F8F8F8
Role Alternative background surfaces
Use Alternative background,
cards, hover overlays

Hex #4D4D4D
Role Body text
Use Paragraphs, labels,
long-form reading
Tip Creates visual hierarchy
when paired with #333333
headings

Hand-drawn accents

Adding a human touch

To support the “warm expert” tone and add a sense of humanity to the visual language, hand-drawn elements are integrated into layouts.

These marks — drawn with a bold pencil or chalk-like texture — bring energy, warmth, and a natural feel.

Typical uses include:

- Underlining or circling key headers
- Drawing attention to important UI elements
- Visual markers such as arrows, checkmarks, list marks

Benefits

1. Adds business value
2. Strategic asset
3. Influences culture

Technology in healthcare
is not about complexity —
it's about clarity.

Hand-drawn accents

Adding a human touch

Tips on usage

Our brand orange adds energy and humanity, but it's not the main act. Elements should be used sparingly, never dominating the composition.

- Limit orange to 15% or less of any layout
- Avoid using it on every slide, social media post, or website block

These accents are not decorative fillers. Each one should be intentional, guiding the viewer with clarity and warmth — just like the way we speak.

Icons

Adding a human touch

To reinforce our sense of humanity, we use a custom icon set that visually aligns with the hand-drawn orange elements.

- Always use approved icons — in the defined colors and style only.
- Use them to support structure: mark sections, points, or content blocks.
- Avoid using icons as illustrations.
Icons should enhance meaning, not act as decorative fillers.

Typography

Headlines

Roboto - Bold

Aa

Roboto Bold brings clarity and confidence to every message. Its clean geometry and strong presence help structure information without overwhelming the reader.

It communicates expertise and trustworthiness — not by shouting, but by leading with calm authority. Roboto Bold allows us to guide attention naturally while keeping our communication accessible and human.

Typography

Paragraphs

Roboto - Regular

Roboto Regular is built for ease, comfort, and clarity. Its neutral tone supports our writing without drawing attention to itself, allowing the message — not the medium — to connect with the reader. It reflects the empathetic and respectful nature of our brand, offering a smooth reading experience that aligns with how we want people to feel: welcomed, informed, and supported. Roboto Regular helps us speak with precision, never cluttered.

Typography scaling system

Base text size: X = 16px (body paragraph)
Scaling ratio: 1.25* (modular scale – major third)

All font sizes are calculated using $X * 1.25^n$, where n is the level above or below paragraph size. This creates a harmonious, proportional hierarchy.

Body paragraph	X	16px	Regular
H5	$X * 1.25$	20px	Bold
H4	$X * 1.25^2$	25px	Bold
H3	$X * 1.25^3$	31px	Bold
H2	$X * 1.25^4$	39px	Bold
H1	$X * 1.25^5$	49px	Bold

Headers vs subheaders

Subheaders are short supportive lines directly under headers. They help clarify or introduce the content while maintaining a softer, secondary tone.

Subheaders are used only under H1 and H2, and follow a consistent ratio:

Subheader = Header * 0.42

This ensures a soft, supportive tone that doesn't compete with the visual dominance of main headers.

Subheaders are optional, but enhance clarity.

Always use sentence case, ensure clear contrast from the header in size & colour.

Header 1

33px

Regular

Paragraphs

Paragraphs should be clear, structured, and easy to read. The recommended line height is 140%, with an ideal line length of approximately 70 characters. This improves legibility and creates a comfortable reading rhythm, especially in longer content blocks.

Avoid visual clutter within body copy: underlines, italics, caps lock, colored text, or frequent use of bold. The message should remain calm, focused, and free of visual noise.

However, **bold** may be used sparingly to highlight essential terms or concepts — only when doing so adds clarity or draws attention to a critical point.

Pull quotes

A pull quote is a short, impactful statement placed inside a block of content — typically an article, blog, or presentation — to highlight a key idea or memorable phrase. It draws the reader's attention and reinforces the main message.

Base text size: X = 16px (body paragraph)

Scaling ratio: X * 1.75

Healthcare teams often struggle to keep their digital products aligned with clinical workflows. It's not just about adding features — it's about solving real problems for patients and providers. That's why discovery workshops are so important: they uncover what actually matters, before a single line of code is written.

Technology in healthcare
is not about complexity —
it's about clarity.

When we facilitate discovery, our goal is to listen first, and recommend second. We combine user research, domain expertise, and collaborative mapping sessions to help teams turn complexity into confidence. The result? Digital tools that feel like they belong — because they were designed with people in mind.

Images

It is recommended to use photographs for brand-related materials. It is desirable that photos be not oversaturated with details and have a calm light pure pastel tone.

Photographs can depict casual scenes from the life of the company, or, may to be neutral abstract images or images of modern simple restrained architecture.

Images

What to avoid

We understand that it is difficult to avoid using stock images. At the same time, we urge you to avoid using generics stock photos or illustrations of happy people, businessmen, or fantastical collage images about technologies.

Examples of usage

#vitechinternship

Internship program gives an opportunity for beginners to get their first commercial experience on real projects, deepen their theoretical knowledge and acquire new technical skills under the guidance of an experienced tutor during 3-4 months of learning and practicing.

Flexible work vibe

You can schedule your hours however you want, as long as you get your work done and show up to meetings on time.

Learnability

Ease and speed with which our non-technical users get familiar with the use of an interface.

Possibility to re-use results

Users should be able to re-use parts of their own work, or to share parts of their works with others users.

Usability

Ease and speed with which users can achieve their goals.

Error protection

Interface should minimise possibilities of mistakes, even though our users are non-technical or semi-technical people.
